'US-07-668-517-44

'Sequence 44, Application US/07668517

'Patent No. 5262309

'GENERAL INFORMATION:
'TITLE OF INVENTION: No. 5262309el Physiologically Active

TITLE OF INVENTION: Polypeptide, Recombinant Plasmid, Recombinant Microorganism

TITLE OF INVENTION: Polypeptide, Recombinant Plasmid, Recombinant Microorganism

TITLE OF INVENTION: Polypeptide, Recombinant Microorganism

TITLE OF INVENTION: Cell, Pharmaceutical Composition and Method of Recovering

NUMBER OF SEQUENCES: 50

CORRESPONDENCE ADDRESS:

STREET: 805 Fifteenth Street, N.W., #700

STREET: B.C.

COUNTRY: U.S.A.

Batent No. 6083693

GENERAL INFORMATION:
APPLICANT: Nandabalan, Krishnan
APPLICANT: Rothberg, Jonathan
TITLE OF INVENTION: INDEMTIFICATION AND COMPARISON OF PROTEIN-PROTEIN
TITLE OF INVENTION: INVERACTIONS THAT OCCUR IN POPULATIONS
FILE REFERENCE: 7934-006
CURRENT APPLICATION NUMBER: US/08/663,824

CURRENT PILING DATE: 1996-06-14

NUMBER OF SEQ ID NOS: 118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      11.5%; Score 8.4; DB 1; Length 12; 90.0%; Pred. US-09-393-783A-39/C
US-09-393-783A-39/C
Sequence 39, AppDication US/09393783A
Patent No. 6355420
GENERAL INFORMATION:
APPLICANT: Schroth, Gary P.
APPLICANT: Schroth, Gary P.
TILLE OF INVENTION: Wucleic Acid Ligand Interaction Assays
TILLE OF INVENTION: WUCLE: 1999-10-09
PRIOR PRILICATION NUMBER: US/09/393,783A
CURRENT APPLICATION NUMBER: US 09/151,890
PRIOR PRILICATION NUMBER: US 09/151,890
PRIOR APPLICATION NUMBER: US 09/151,890
                                                                                 TYPE: DNA
ORGANISM: Artificial Sequence
FEATURE:
OTHER INFORMATION: Description of Artificial Sequence: linker

OTHER INFORMATION: synthesized test oligonucleotide for binding

US-09-1S1-890B-39
Sequence 39, Application US/09151890B
Patent No. 6420109
Patent No. 6420109
GENERAL INFORMATION:
APPLICANT: Gary P. Schroth
APPLICANT: Thomas Wayne Bruice
TITLE OF INVENTION: Nucleic Acid Ligand Interaction Assays
FILE REFERENCE: 4600-0128
CURRENT APPLICATION NUMBER: US/09/151,890B
CURRENT FILING DATE: 1998-09-11
NUMBER OF SEQ ID NOS: 80
NUMBER OF SEQ ID NOS: 80
NUMBER OF SEQ ID NOS: 80
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     11.5%; Score 8.4; DB 1; 90.0%; Pred. No. 2.4e+02;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        엄
                                                                                                                                                                                                                                                                                                 Sequence 26, Application US/09163485

Patent No. 627571

GENERAL INFORMATION:

APPLICANT: BILLMORE, HELEN

APPLICANT: BICANDENG, WILLIAM

APPLICANT: GILLIES, GEORGE

TITLE OF INVENTION: SEQUENTIAL CONSENSUS REGION-DIRECTED AMPLIFICATION OF

TITLE OF INVENTION: NUMBER: US/09/163,485

CURRENT APPLICATION NUMBER: US/09/163,485

CURRENT FILING DATE: 1988-08-30

SOFTWARE: Patentin Ver. 2.0

LENGTH: 12

TYPE: DNA

TYPE: DNA

TYPE: DNA

TYPE: DNA

Patent No. 5607646

FRIENCAL INPORMATION RAZUNOTI

APPLICANT: KAMBARA, Hideki

TITLE OF INVENTION: POLYNUCLEOTIDE PREPARATIVE METHOD AND DETECTION

TITLE OF INVENTION: METHOD USING SAME

NUMBER OF SEQUENCES: 18

CORRESPONDENCE ADDERSS:

ADDESSEE: Antonelli, Terry, Stout & Kraus

STREET: Suite 600, 1919 Pensylvania Ave., NW

STREET: Suite 600, 1919 Pensylvania Ave., NW

COUNTRY: USA

INPERIORATION NAMER: PC-DOS/MS-DOS

SOFTWARE: Patentin Release #1.0, Version #1.25

Sequence 8, Application US/08680350
| Sequence 8, Application US/08680350
| Sequence No. 5955590
| GENERAL INFORMATION:
| APPLICANT: Lawina, Asya
| APPLICANT: Lamecnik, Paul C
| TITLE OF INVENTION: Conjugates of Minor Grocve DNA Binders
| TITLE OF INVENTION: With Antisense Oligonucleotides
| NUMBER: OF SEQUENCES: 18
| CORRESPONDENCE ADDRESS: 18
| ADDRESSEE: Wolf, Greenfield & Sacks PC
| STREET: 600 Atlantic Avenue
| CITY: Boston
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DB 1; Length 9; . 1.7e+03;
FITLE OF INVENTION: with Antisense Oligonucleotides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ZIP: 02210

Squence 15, Application US/08680350
Patent No. 595550
GENERAL INFORMATION:
APPLICANT: Levina, Asya
APPLICANT: Zamecnik, Paul C
TITLE OF INVENTION: Conjugates of Minor Groove DNA Binders
TITLE OF INVENTION: With Antisense Oligonucleotides
NUMBER OF SEQUENCES: 18
CORRESPONDENCE ADDRESS:
ADDRESSEE: Wolf, Greenfield & Sacks PC
STREET: 600 Atlantic Avenue

Sequence 9, Application US/09063450
Patent No. 6109776
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: Method and System for Computationally Identifying TITLE OF INVENTION: Clusters Within a Set of Sequences
TITLE OF INVENTION: Clusters Within a Set of Sequences
TITLE OF INVENTION: Clusters Within a Set of Course Precision of Course of Sequences
CURRENT FILING DATE: 1998-04-21
NUMBER OF SEQ ID NOS: 38
SOFTWARE: Patentin Ver. 2.1
SEQ ID NO 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ; TYPE: DNA

US-08-685-484-49/c
Sequence 49, Application US/08655484
Patent No. 5719262
GENERAL INFORMATION:
APPLICANT: Buchardt et al.
TITLE OF INVENTION: Peptide Nucleic Acids Having Amino Acid
TITLE OF INVENTION: Side Chains
NUMBER OF SEQUENCES: 53
CORRESPONDENCE ADDRESS:
ADDRESSER: Woodcock Washburn Kurtz Mackiewicz & No. 5719262ris LLP
STREET: One Liberty Place - 46th Floor
CITY: Philadelphia
CORRESPONDENCE ADDRESS:
ADDRESSEE: Woodcock Washburn Kurtz Mackiewicz & No. 5714331ris LLP
STREET: One Liberty Place - 46th Floor
CITY: Philadelphia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ilarity 100.0%; Score 8; DB 1; Length 10; ilarity 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 58, Application US/08686113A
Patent No. 576685
GENERAL INFORMATION:
PAPLICANT: Buchardt et al.
TITLE OF INVENTION: Peptide Nucleic Acids Having Enhanced
TITLE OF INVENTION: Affinity And Sequence Specificity
Patent No. 5766855
NUMBER OF SEQUENCES: 60
CORRESPONDENCE ADDRESS:
ADDRESSEE: Woodcock Washburn Kurtz Mackiewicz and No. 5766855ris
STREET: One Liberty Place - 46th Floor

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            US-08-847-095A-51/c

| Sequence 51, Application US/08847095A
| Patent No. 5786461
| Patent No. 5786461
| GENERAL INFORMATION:
| APPLICANT: Buchardt et al.
| TITLE OF INVENTION: Peptide Nucleic Acids Having Amino Acid
| TITLE OF INVENTION: Side Chains
| NUMBER OF SEQUENCES: 53
| CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     11.0%; Score 8; DB 1; Length 10; 100.0%; Pred. ATTORNEY AGENT INFORMATION:
NAME: Wetherell, Jr., Ph.D., John R.
REGISTRATION NUMBER: 31,678
REFERENCE/POCKET NUMBER: PD-3006
TELEPHONE: (619) 455-5110
INFORMATION FOR SEQ ID NO: 8:
SEQUENCE CHARACTERISTICS:
LENGTH: 10 base pairs
TYPE: nucleic acid
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Worderfect 6.1
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/847,095A
FILING DATE:
CLASSIFICATION
PRIOR APPLICATION DATA:
APPLICATION NUMBER: 08/685,484
FILING DATE: 24-UU-1996
APPLICATION NUMBER: 08/108,591
FILING DATE: 22-NOV-1993
ATTORNEY/AGENT INFORMATION:
NAME: MACHAIN NUMBER: 38,325
FILING DATE: 22-NOV-1993
ATTORNEY/AGENT INFORMATION:
NAME: MACHAEL P. SLYABER
REFERENCE/DOCKET NUMBER: 151S-270
TELEPHONE: 215-568-3109
SEQUENCE CHARACTERISTICS:
LENGTH: 10 Dases
TYPE: NUCleic acid
STRANDENDESS: single
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

Sequence 228, Application US/0838353
Patent No. 6010895
GENERAL INFORMATION:
APPLICANT: Deacon, Nicholas J.
APPLICANT: Deacon, Nicholas J.
APPLICANT: McPhee, Dale A.
APPLICANT: Cooper, David
TITLE OF INVENTION: NON-PATHOGENIC STRAINS OF HIV-1
NUMBER OF SEQUENCES:
ADDRESSEE: Scully, Scott, Murphy & Presser
STREET: 400 Garden City Plaza
CITY: Barden City Plaza
CITY: Garden City Plaza
CITY: Barden City Plaza
CUNTRY: United States
ZIP: 11530
COMPUTER: New York
COUNTRY: United States
ZIP: 11530
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DoS/MS-DOS
SOFTWARE: BATOMINE: US/08/388,353
FILLING DAFE: Patent In Release #1.0, Version #1.25
CLASSIPICATION: 424
ATTORNEY/AGENT INFORMATION:
TELEPHONE: Gill) 742-4343
TELEFENCE/DOCKET NUMBER: 31,346
REPERENCE/DOCKET NUMBER: 31,346
REPERENCE/DOCKET NUMBER: 31,346
TELECOMMUNICATION INDEMER: 9606
TELEX: 230 901 SANS UR
INFORMATION FOR SEQ ID NO: 228:
SEQUENCE CHARACTERSTICS:
LENGTH: 10 base pairs
TYPE: nucleic acid
STRANDEDNESS: single
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  g

Sequence 56, Application US/09337304

Sequence 56, Application US/09337304

Patent No. 6613673

GENERAL INFORMATION:
PAPLICANT: Buchard.
APPLICANT: Bard, Michael
APPLICANT: Berg, Rolf Henrik
TITLE OF INVENTION: Peptide Nucleic Acids Having 2, 6-Diaminopurine Nucleobases
CURRENT APPLICATION NUMBER: US/09/337,304

CURRENT APPLICATION NUMBER: US/09/337,304

CURRENT FILING DATE: 1999-06-21

PRIOR APPLICATION NUMBER: 08/847,110

PRIOR APPLICATION NUMBER: 08/866,114

PRIOR FILING DATE: 1996-07-24

PRIOR FILING DATE: 1996-07-24

PRIOR FILING DATE: 1993-11-22

PRIOR FILING DATE: 1993-11-22

PRIOR FILING DATE: 1991-05-24
                                                                                                                                                                                                                                                                                                            ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Decouple 58, Application US/09337304

Patent No. 6613873

GENERAL INFORMATION:

APPLICANT: Buchardt, Ole

APPLICANT: Beholm, Michael

APPLICANT: Beholm, Michael

APPLICANT: Benown Nielsen, Peter E.

APPLICANT: Berg, Rolf Henrik

TITLE OF INVENTION: Peptide Nucleic Acids Having 2, 6-Diaminopurine Nucleobases

FILE REFERENCE: ISTS-3809

CURRENT FILING DATE: 1999-06-21

PRIOR PILING DATE: 1999-06-21

PRIOR PILING DATE: 1997-05-01

PRIOR PILING DATE: 1997-05-24

PRIOR PILING DATE: 1991-05-24

PRIOR PILING DATE: 1992-04-15

NUMBER OF SEQ ID NOS: 60

SOFTWARE: PatentIn Version 3.1

DESCRIPTION: third strand derived from esterase D
DESCRIPTION: sequence region in Seq ID No. 586124473
HYPOTHETICAL: Yes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ; FUBLICATION INFORMATION:
; RELEVANT RESIDUES IN SEQ ID NO: 74 :FROM 1 TO 11
US-08-173-489C-74
COMPUTER: IBM PC/XT/AT
OPERATING SYSTEM: MS-DOS version 6.2
SOCTAARE: Wordperfect Version 5.1
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/173,489C
FILING DATE: 2.2 DEC 1993
CLASSIFICATION: 435
PRIOR APPLICATION DATA:
APPLICATION DATA:
APPLICATION NUMBER: US 07/968,436
FILING DATE: 2.9 OCT 1992
ATTORNEY/AGENT INFORMATION:
NAME: Handelman, Joseph H.
REGISTRATION NUMBER: U95.179
REFERENCE/DOCKET NUMBER: U95.18-6
TELECOMMUNICATION INFORMATION:
TELEPHONE: (atcorney) (212) 246-8959
INFORMATION FOR SEQ ID NO: 74:
EROTHER CHARACTERISTICS:
LENGTH: 11 bases
TYPE: Nucleic Acid
STRANDENESS: single stranded
TTPE: Nucleic Acid
STRANDENESS: single stranded
TOTOLOGY: Linear
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TYPE: DNA

MOLECULE TYPE: Genomic DNA
DESCRIPTION: esterase D gene (Accession # M13450)
DESCRIPTION: mucleotides 777 to 787
HYPOTHETICAL: No
ANTI-SENSE: No
ORIGINAL SOURCE:
ORGANICM: Homo sapiens
POSITION IN GENOME:
CHROMOSOME/SEGMENT: chromosome 13
MAP POSITION: 13141.1-q14.2
PUBLICATION: 13141.1-q14.2
AUTHORS: Lee, E Y H P, Lee, W H.
TITLE: Molecular cloning of the
TITLE: molecular cloning of the
TITLE: retinoblastoma

RESULT 453
US-07-754-918A-4/C
US-07-754-918A-4/C
Sequence 4, Application US/07754918A
Federat No. 5286484
GENERAL INFORMATION
TITLE OF INVENTION: NUCLEOTIDE SEQUENCE CODING FOR AN
TITLE OF INVENTION: OUTER MEMBRANE PROTEIN FROM NEISSERIA MENINGITIDIS AND USE
TITLE OF INVENTION: OF SAID PROTEIN IN VACCINE PREPARATIONS
NUMBER OF SEQUENCES: 14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Sequence 251, Application US/09249155A |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 450

US-09-249-155A-31/C

is Gaquence 31, Application US/09249155A

patent No. 6538173

GENERAL INVORMATION:

APPLICANT: Heber-Katz, Ellen

TITLE OF INVENTION: Compositions and Methods for Wound

TITLE OF INVENTION: Healing

FILE REFREENCE: 00486.78503

CURRENT APPLICATION NUMBER: US 60/249,155A

CURRENT FILING DATE: 1999-02-13

PRIOR APPLICATION NUMBER: US 60/074,737

PRIOR PILING DATE: 1998-02-13

PRIOR PILING DATE: 1998-09-26

NUMBER OF SEQ ID NOS: 346

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 31

LENGTH: 11
                                 US-09-249-155A-18/C

Sequence 26, Application US/08410116B
Patent No. 5599675
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Sydney Brenner, Glenn Albrecht, Andrew J. Blasband
TILLE OF INVENTION: DNA Sequencing by Stepwise Ligation and Cleavage
NUMBER OF SEQUENCES: 40
CORRESPONDENCE ADDRESSE:
ADDRESSEE: Stephen C. Macevicz, Lynx Therapeutics, Inc.
STREET: 3832 Bay Center Place
CITY: Hayward
STATE: California
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               11.0%; Score 8; DB 1; Length 12; 100.0%; Pred.
